## MERINO & POLL MERINO STUDS

Here at Wallaloo park we offer a tethered sale structure which is client friendly. This allows buyers the opportunity to compare all attributes and evaluate structure without the hindrance of straw or gates.

The Wallaloo Park bloodline is recognised as one of the leading suppliers of merino genetics across Australia, having proven results over all bloodlines. We aim to maximize constitution, wool cut, temperament and milking ability to increase profit for our clients.

Top priced ram sold On Property to Franklin River Grazing Co.  
From Left: Bill Walker - Classings, Andrew Sloane - Landmark, Kathrine and Trent Carter - Wallaloo Park.

The 2016 sale was an enormous success, with 120 rams sold at auction, averaging \$3,325. This average was accelerated by the top prices for the stud end.

A top price of \$26,000 was paid for WP150245, purchased through 'Classings' for Frankland River Grazing Co, Frankland River, WA. Sale summary; 18 stud rams av \$7,222 and flock rams averaging \$2,534

Mr Walker from Classings said Mr Beasley would use the ram as a semen sire on 200 stud ewes this year via artificial insemination (AI), and then as a live sire on 120 stud ewes during a "hectic paddock joining".

November 2016 saw, extensive AI and ET programs carried out with great success. Both mature age and maidens ewes flushing well. The maidens averaged 15 embryos over 2 flushings. The standout being our successful show ewe from Bendigo sheep show 2016 WP151342 producing 44 embryos in total.

## 2016 SALE RESULTS

**On Property Sale –Top \$26,000 with 18 stud rams av \$7,222 and flock rams averaging \$2,534**

*Pot of gold at the end of the Rainbow... 2016 ET lambs*

The 2017 season is shaping up to be very exciting. For the first time in over a decade, all rams being offered by Wallaloo Park will be presented only at our 26th On Property Ram Sale. This will enable clients to have the opportunity to view the standard of stud offerings side by side.

The sale rams this year have been run in the same management group. No itemised special feeding or shedding for specialist groups or foot pairing until 12 months of age.

Classing at Wallaloo park, as always, is done through both visual and measured appraisal, and is not distorted by additional treatments. We have successfully measured and gathered total drop data for 3 years now and we are ready to indorse and improve our ASBVS trends with specially selected joinings through the utilisation of our newly formed 'Walladale' family. The first lambing of all Walladale ewes came through with a 0.2 increase in a pre-lambing condition score.

*Pregnant 2016 April/May drop ewe lambs, 12 weeks pre lambing*

Special focus through both programs has been to generate additional horn families and to benchmark through proven poll outcrosses.

All sires retained for 2016 kept performing with our two top performing sires, WP150422 and WP150441, both cutting 12kg for 7 months growth.

All natural joinings were a success at less than 1% joining. True libido and constitution was demonstrated when we mated unclassed ewe lambs joined at a minimum of 44kgs live weight at the start of 2017.

All rams used had been through a 2-cycle joining, during November and December. Then after a two week spell, rams were put back in with ewe lambs for another 2 cycles, joined at 0.85%. Success, scanned at 78% conception with 108% lambing.

For the 1st time, Wallaloo Park presented ewes at the 2016 Bendigo show. A great start with WP151342 performing exceptionally well through the strong wool classes.

**We are all extremely excited about the 2017 drop, and we cannot wait for the genetic progress and results in years to come.**
