

Wallaloo Park

MERINO & POLL MERINO STUDS

Here at Wallaloo park we offer a tethered sale structure which is client friendly. This allows buyers the opportunity to compare all attributes and evaluate structure without the hindrance of straw or gates.

The Wallaloo Park bloodline is recognised as one of the leading suppliers of merino genetics across Australia. Having proven results over all bloodlines. We aim to maximize constitution, wool cut, temperament and milking ability to maximize profit for our clients.

True Dual Purpose Focus

- Wallaloo Parks Pre potent genetics allows specialist sires to be used effectively.
- Stud ewes at Wallaloo Park are chosen for their ability to maximize kilograms of meat and wool per hectare.
- 1500 stud ewes this year marked 131%, with twin mobs up to 191%(109 ewes) and averaging 171%.

Walladale

Selecting foundation Walladale ewes with the assistance from Mark Ferguso

The Walladale brand was first established in 2001, promoting a dual purpose breeding focus, in the Wallaloo Park genetic package.

The 'Walladale' name has been reborn, due to market demands. This will be a measured breeding direction. Through the help of ASBVs, which have been measured and used in Wallaloo Park for 5 years now.

The Walladale family will be driven by ASBV selection pressure to utilize productivity, while also still maintaining a stringent visual classing regime.

First steps have already been taken with a select nucleus of ewes specially chosen from the Wallaloo Park ewe base that will complement the Walladale breeding focus. We are pleased with the upcoming progeny from our first specially selected outcross.

We are all very excited to see where this family will take us. We believe it will complement the strong, predictable Wallaloo Park breeding direction in the future!

Who said merino ewes couldn't count?

Extract from "Who said merino ewes couldn't count?" Written by Rick Bayne – Media Masters VIC

Sceptics doubting the role of merinos in Australia's modern sheep industry have good reason to reconsider their views in the wake of exceptional results achieved by a Wimmera stud.

"We generally wean around 120-130 and twins around 150-160. This year scanned twin ewes came back at just on 190 per cent of marked lambs and averaged 171%" Trent Carter said.

The stud's nutritional consultant, Steve Cotton from Dynamic Ag Consulting, said the survival rate was the highest he had seen.

"It was an exceptional result and one which proves what farmers can achieve when all the right elements are in place," Dr Cotton said.

"It's really good news for the merino industry."

Mr Carter and Dr Cotton said a combination of factors had led to the success which sent a strong message to the industry that merinos can be profitable.

"A lot got out of merinos and went into other breeds to improve lamb survival but this highlights what can be achieved with good management, good genetics and good nutrition," Dr Cotton said.
